

Pictured above are two style Permatur Series 102 Plate/Part Handling Systems with 2ea. TP-2000 Lifting Magnets suspended on an 6' load beam with a Shackle/Ring Assembly for attachment to a single hook hoist. The System includes a #547 AC Powered Relay Pushbutton Controller. The Controller includes Permatur's Exclusive (-S) Safety Indicator Lighting System to tell the Operator when the Magnets have attached to the load in preparation for a safe lift. The Controller also provides the capability to interface the Controls with ON/OFF Pushbuttons on the Hoist Pendant or Crane Radio Controller. Both style Systems have the Magnets on Cam Followers to facilitate their repositioning to address changes in Part sizes. The individual System pictured above has, additionally, a Lead Screw to support this repositioning of the Magnets while the two Systems shown together require manual repositioning.
