

PERMADUR Thin Plate Handling Systems

Through the use of our **PERMADUR** BPR-350 ElectroPerm Lifting Magnet, we are able to build Plate Handling Systems that can provide single plate handling off a stack down to 16-18 Ga. plate. The above pictured Series 612 System is being used to handle 4x8 and 5x10 plates from 11 ga. to 1" Thick (2100# Max.). As with our other Systems, all that is required is a brief pulse of current to the magnets to turn them ON or OFF. These Magnets will not drop a load due to loss of electrical power.
